**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-22, drawn to a method for manufacturing a transformer winding, classified in class 29, subclass 605.
  - II. Claims 22-25, drawn to a method for manufacturing a transformer associated a first and second layer of turns of conductor, classified in class 29, subclass 602.1.
  - III. Claims 23-25, drawn to curing process, classified in class 428, subclass 414.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the invention I does not require the particulars of "insulating material to be positioned between the first and second layers of turns" of the Invention II. The Invention II has separate utility such as "for a transformer having a first and second layers of turn of electrical conductor", etc.

Inventions (I, II) and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III vice versa II

and I has separate utility such as curing the adhesive by a predetermined period. Furthermore, inventions I-III are different because of their scope and they do have different mode of operations, functions and/or effects. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for Group I is not necessary required for Group II and/or III, because of their recognized divergent subject matter (as indicated in paragraphs 1-2 above), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143). Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
